

LAGOS LOCAL GOVERNMENT RECEIPT REWARD SCHEME

Updated Technical Prototype Specification

Merchant onboarding • digital receipt delivery • consumer ticket checking • prize claims • LGA analytics •
draws • fraud controls

Prototype objective

Demonstrate a receipt-reward layer that can integrate with Lagos/LGA revenue and merchant-registration systems without replacing existing tax, payment or revenue infrastructure.

Version: MVP Technical Baseline — 29 August 2026

1. Prototype Objective

Build a working demonstration in which registered merchants issue digital receipts to customers, customers privately receive a receipt/ticket reference, and the same reference can be checked for validity and weekly or monthly draw results.

Prove that the platform can operate as an incentive and transparency layer over existing Lagos/LGA systems rather than as a replacement tax or payment platform.

Give the Local Government Area (LGA) an auditable dashboard showing merchant participation, verified receipt activity, transaction value, reward entries, winners, fraud controls and draw status.

Demonstrate an end-to-end winner-claim process in which a winning customer submits identity/contact and bank information for controlled review before payment.

Merchant Registration → Receipt Issue → Private Customer Delivery → Ticket Validation → Reward Entry → Draw → Winner Check → Claim Review → Reporting

2. Updated MVP Scope

- Merchant/business registration and verification using a Lagos State Tax ID or an LGRRS System ID together with a verified phone number.
- Merchant login/access after verification, with role-based merchant permissions.
- Digital receipt creation for goods or services, including examples such as retail purchases, restaurants, salons and barbershops.
- Private receipt delivery to the customer by WhatsApp, SMS and/or the LGRRS application.
- A public consumer page for entering a receipt/ticket ID and checking whether it is valid and whether it won in the relevant weekly or monthly draw.
- Prize claim submission by a winner using full name, verified phone number, bank name and account number.
- LGA administrator dashboard covering receipts, merchants, residents, transaction value, reward entries, fraud attempts, prizes and current draw information.
- Merchant and sales analytics for the LGA, including merchant performance, sales totals, category distribution and merchant status.
- Deterministic fraud controls, draw administration and immutable-style audit records.

2.1 Out of Scope for Version 1

- Direct production integration with Lagos State or LGA systems before official technical access is granted.
- Replacing a merchant POS, accounting system, tax engine or payment gateway.
- Automated real-money prize disbursement without administrative verification.
- Advanced machine-learning fraud scoring.
- State-wide or national rollout functions.
- Complex tax calculation, merchant settlement or financial accounting.

3. User Roles and Access Boundaries

Role	Primary Responsibilities	Important Access Restriction
Merchant / Business	Register/verify business, issue receipts, select delivery channels, view own sales and delivery status.	Must not see a customer's full ticket/receipt ID or QR verification token in normal merchant views. Customer phone is masked in history.
Consumer	Receive private receipt/ticket reference, check validity and draw result, submit a prize claim if selected.	No account required for basic ticket checking. Sensitive claim details are never exposed to merchants.
LGA Administrator	View aggregate programme metrics, merchant performance, draw status, fraud activity, claims and operational reports.	Access to personally identifiable information should be limited to specific administrative workflows.

System Auditor	Review audit events for receipt issuance, delivery, verification, draw execution, claim actions and administrative changes.	Read-only or tightly restricted access.
----------------	---	---

4. Merchant / Business Onboarding and Access

A merchant must be registered and verified before it can issue reward-eligible receipts. The MVP should support either a Lagos State Tax ID or an internal LGRRS System ID so that the prototype can operate before official Lagos API access is available.

4.1 Merchant Registration Fields

- Business Name
- Business Type / Category
- Target LGA
- Lagos State Tax ID OR LGRRS System ID
- Business phone number
- Verification status: Pending, Verified, Under Review, Suspended

4.2 Merchant Verification

For the MVP, business verification can use a demo verification provider. The implementation must use an adapter interface so the demo lookup can later be replaced with an approved Lagos State or LGA business/tax verification service.

State	Merchant Action	System Behaviour
Unverified	Enter business details and ID.	Validate format and query demo/approved provider.
Verified	Continue to merchant portal.	Create authenticated merchant session.
Not Found	Correct or submit details for review.	Do not permit receipt issuance.
Suspended	Contact support/LGA.	Block new receipt issuance.

5. Merchant Receipt Issuance and Customer Delivery

After business verification, the merchant can issue a receipt for a real-world purchase or service. The customer-facing receipt/ticket reference is generated by the platform and delivered privately to the customer.

5.1 Receipt Creation Fields

- Customer name (optional)
- Customer phone number (required when WhatsApp/SMS delivery is selected)
- Item / Service description
- Amount
- Receipt delivery channel: WhatsApp, SMS and/or In-App
- Merchant identifier and LGA are taken from the authenticated merchant profile
- Transaction timestamp is created by the server

5.2 Privacy Rule for Merchant Screens

Mandatory MVP rule: the merchant must not be shown the customer's full receipt/ticket ID or a QR code that can be used to impersonate the customer in the reward flow.

- Merchant receipt history should display only a masked receipt reference such as ****92K.
- Customer phone numbers should be masked in history, for example 0808 *** 7788.
- The merchant may see service/item, amount, date/time and delivery status.
- The full ticket reference is delivered to the customer through the selected private channel.

5.3 Delivery Statuses

Status	Meaning
Ready to Send	Receipt created but not yet sent through the selected channel.
Sent	Delivery provider accepted the message.
Delivered	Delivery provider confirms delivery where supported.
Failed	Delivery could not be completed; merchant may retry without exposing the full ticket ID.

6. Consumer Ticket Check and Winner Experience

The consumer receives the private receipt/ticket ID and can use a simple public web or mobile page to check the ticket. The consumer does not need access to the merchant portal.

6.1 Check Ticket Page

- Input: Receipt/Ticket ID
- Action: Check Now
- Return whether the receipt exists and is valid
- Return merchant name, LGA, receipt date and amount only where appropriate
- Return reward entry status and the relevant weekly/monthly draw
- If the draw has been completed, return Winner or Not a Winner

6.2 Consumer Result States

Result State	Example User Message	Next Action
Valid - Draw Pending	Receipt is valid and entered in the current draw.	Show draw date/status.
Valid - Winner	Congratulations! You won ₦X in the weekly/monthly draw.	Show Claim Your Prize button.
Valid - Not Winner	Receipt is valid but was not selected in this draw.	Allow user to check another ticket.
Already Claimed	A claim has already been submitted for this winning ticket.	Show claim reference/status where identity check permits.
Voided / Refunded	This receipt is no longer eligible.	No claim.
Under Review	This receipt is being reviewed.	Show neutral review status.
Not Found	Receipt could not be validated.	Ask user to re-check the ticket ID.

7. Winner Claim Workflow

Winning status does not trigger an automatic payout. The winner must submit a claim. This separates public ticket checking from sensitive payment information.

7.1 Claim Form

- Full Name
- Phone Number used for the receipt/ticket
- Bank Name
- Account Number
- Receipt ID and Reward Entry ID are populated by the server and are not editable

7.2 Claim Validation

- Winning ticket must exist and belong to a published draw result.
- Ticket must not already have a paid or active duplicate claim.
- Submitted phone number must match the protected phone reference associated with the receipt, subject to the final identity policy.

- Bank details are stored securely and are visible only to authorised claim-processing roles.
- Successful submission generates a Claim Reference and initial status Under Review.

7.3 Claim Status Lifecycle

Submitted → Under Review → Verified → Approved → Paid

Alternative terminal states: Rejected, Cancelled or Expired.

8. LGA Administrator Dashboard

The LGA dashboard is the operational and policy view of the pilot. All prototype figures must be visibly marked as DEMO DATA.

8.1 Dashboard KPI Cards

- Verified Receipts
- Participating Merchants
- Unique Residents
- Total Value of Transactions
- Reward Entries for the current week/month
- Fraud Attempts Blocked
- Prizes Won
- Current Prize Pool

8.2 Dashboard Analytics

- Receipt trend over the previous weeks
- Top merchants by verified receipts
- Fraud and risk summary
- Recent activities and audit-sensitive events
- Current draw period, eligible entries, prize pool, draw date and status

9. LGA Merchant and Sales Analytics

The LGA should have a dedicated merchant view for understanding participation and the economic activity being recorded through the scheme.

9.1 Merchant Sales KPIs

- Participating Merchants
- Active Merchants in selected period
- Total Merchant Sales / transaction value represented by verified receipts
- Average Sales per Merchant
- Top Sales Merchant
- Sales Growth over the selected comparison period

9.2 Merchant Performance Table

- Merchant name
- Business type
- Ward / Area
- Receipts issued
- Sales value
- Reward entries generated
- Merchant status: Active, Verified, Under Review, Suspended

The LGA view may drill into a merchant for compliance or support purposes, but normal reporting should avoid exposing customer ticket IDs, customer bank details or unnecessary personal data.

10. Updated Prototype Technical Architecture

Recommended stack for a fast, credible demonstration:

Layer	Recommended Technology / Pattern
Frontend	React web application with separate Merchant, Consumer and LGA Admin experiences.
Backend	ASP.NET Core .NET 8 Web API.
Database	SQL Server.
Merchant Authentication	OTP-assisted phone verification plus JWT/session authentication after business verification.
Receipt Delivery	Notification adapter supporting WhatsApp, SMS and In-App providers.
Lagos/LGA Integration	Adapter interfaces for merchant/tax ID verification and future receipt/revenue-system integrations.
Draw Randomness	Cryptographically secure random-number source with persisted candidate-set hash and draw metadata.
Audit	Structured logs plus immutable-style AuditEvent records.
Hosting	Azure App Service + Azure SQL or equivalent low-cost demo environment.

**React UI → .NET 8 API → SQL Server → Business Verification Adapter → Receipt Service → Delivery Adapter
→ Eligibility/Fraud Rules → Draw Service → Claim Service → Admin Reporting**

11. Integration Strategy

The platform should isolate Lagos/LGA dependencies behind interfaces. Demo providers are used during the prototype; approved government or third-party providers can replace them later without changing the core reward engine.

Interface	MVP Provider	Future Production Provider
IBusinessVerificationProvider	DemoBusinessVerificationProvider	Approved Lagos/LGA tax or business identity service
IReceiptSourceProvider	Local prototype receipt database	Approved Lagos/LGA receipt or revenue platform
INotificationProvider	Demo/real sandbox SMS and WhatsApp provider	Approved production SMS/WhatsApp provider
IPayoutProvider	No automatic payout in MVP	Approved government/bank payment workflow

12. Updated Core Data Model

Entity	Key Fields	Purpose
Merchant	MerchantId, BusinessName, BusinessType, LgaCode, LagosTaxIdEncrypted, LgrsSystemId, PhoneEncrypted, PhoneHash, Status	Participating business identity and verification state.
Receipt	ReceiptId, MerchantId, Amount, ItemService, TransactionDate, Status, DrawPeriodId	Core customer transaction record. Full ReceiptId is not exposed in normal merchant history.
ReceiptDelivery	DeliveryId, ReceiptId, Channel, DestinationMasked, ProviderRef, Status, SentAt	Tracks WhatsApp/SMS/In-App delivery.
RewardEntry	EntryId, ReceiptId, DrawPeriodId, EligibilityStatus, RiskStatus, CreatedAt	Represents one eligible receipt in a draw.
DrawPeriod	DrawPeriodId, Type, StartDate, EndDate, DrawDate, Status, PrizeBudget	Weekly or monthly reward period.
DrawResult	DrawResultId, DrawPeriodId, EntryId, PrizeTier, PrizeAmount, DrawTimestamp	Winning selection.

PrizeClaim	ClaimId, DrawResultId, NameEncrypted, PhoneHash, BankNameEncrypted, AccountNumberEncrypted, Status, ClaimRef, CreatedAt	Sensitive winner-claim record.
FraudFlag	FlagId, EntityType, EntityId, RuleCode, Severity, Status	Suspicious receipt, merchant, entry or claim conditions.
AuditEvent	EventId, EventType, EntityType, EntityId, ActorId, Timestamp, Metadata	Accountability record.

13. Core Business Rules

13.1 Merchant Rules

- Only Verified merchants may issue reward-eligible receipts.
- Suspended merchants cannot issue new receipts.
- A merchant can access only its own operational data.
- Merchant history returns masked customer phone numbers and masked receipt references.
- Merchants cannot retrieve customer bank details or full prize-claim records.

13.2 Receipt and Eligibility Rules

- Receipt must be created by a verified participating merchant or validated through an approved future receipt source.
- Receipt status must be Valid.
- Receipt must fall within the active pilot scope and draw period.
- One receipt may create only one active reward entry per applicable draw.
- Voided/refunded receipts lose eligibility and any unresolved entry must be cancelled.
- Blocked merchants or mandatory fraud failures prevent entry creation.

13.3 Draw Rules

- Only eligible, non-blocked entries are included.
- Candidate set is frozen before the draw.
- Candidate-set count and a hash/snapshot reference are persisted.
- Random selection uses a cryptographically secure method.
- Draw result is immutable after publication except through a formally logged correction process.
- The same entry cannot win more often than programme rules allow.

14. Version 1 Fraud and Integrity Controls

Rule	Condition	Action
DUPLICATE_ENTRY	Same receipt attempts to create multiple active entries.	Block.
INVALID_RECEIPT	Receipt does not exist or fails validation.	Block.
VOID_OR_REFUND	Receipt is cancelled, voided or refunded.	Block / cancel entry.
HIGH_VELOCITY	Abnormally high receipt volume from one merchant in a short period.	Review.
REPEATED_VALUE_CLUSTER	Unusual concentration of identical-value receipts.	Review.
OUT_OF_HOURS_SPIKE	Unusual volume outside normal operating pattern.	Review.
MERCHANT_SELF_ENTRY	Merchant/staff appears to be entering their own receipts.	Review / block.
CLAIM_PHONE_MISMATCH	Winner claim phone does not match protected receipt phone reference.	Block / manual review.
DUPLICATE_CLAIM	More than one active claim is submitted for the same winning result.	Block.

15. Updated MVP API Endpoints

Method	Endpoint	Purpose
POST	/api/merchants/register	Register merchant using Lagos Tax ID or LGRRS System ID and phone.
POST	/api/merchants/verify	Verify merchant/business identity through provider adapter.
POST	/api/auth/merchant/request-otp	Send merchant access OTP.
POST	/api/auth/merchant/verify-otp	Verify OTP and return merchant session/token.
GET	/api/merchant/profile	Return authenticated merchant profile.
POST	/api/merchant/receipts	Create a receipt and internal ticket reference.
POST	/api/merchant/receipts/{receiptId}/deliver	Send receipt privately through selected channel(s).
GET	/api/merchant/receipts	Return merchant receipt history with masked receipt refs and masked phones.
GET	/api/public/receipts/{receiptId}/check	Check receipt validity, draw state and winner status.
GET	/api/public/draw-periods/current	Return active weekly/monthly draw information.
POST	/api/public/prize-claims	Submit winner name, phone and bank details.
GET	/api/public/prize-claims/{claimRef}	Return safe claim status.
GET	/api/admin/dashboard	Return LGA dashboard metrics.
GET	/api/admin/merchants	List/filter merchants and status.
GET	/api/admin/merchants/sales	Return merchant sales/performance analytics.
GET	/api/admin/draws/current	Return current draw and candidate metrics.
POST	/api/admin/draws/{drawPeriodId}/close	Freeze candidate population.
POST	/api/admin/draws/{drawPeriodId}/run	Run controlled draw.
POST	/api/admin/draws/{drawPeriodId}/publish	Publish winners.
GET	/api/admin/prize-claims	List prize claims for authorised review.
PATCH	/api/admin/prize-claims/{claimId}/status	Move claim through review/verified/approved/paid states.
GET	/api/admin/fraud-flags	List flagged activity.
GET	/api/admin/audit-events	View audit records.

16. Key API Contract Examples

16.1 Create Merchant Receipt - Request

```
{
  "customerName": "Tunde A.",
  "customerPhone": "08081127788",
  "itemService": "Haircut",
  "amount": 2500.00,
  "deliveryChannels": ["WHATSAPP", "SMS"]
}
```

16.2 Merchant Receipt History - Safe Response

```
{
  "receiptRefMasked": "*****92K",
  "customerName": "Tunde A.",
  "customerPhoneMasked": "0808 *** 7788",
  "itemService": "Haircut",
  "amount": 2500.00,
  "deliveryStatus": "DELIVERED",
  "transactionDate": "2026-08-29T11:45:00+01:00"
}
```

16.3 Public Ticket Check - Winner Response

```
{
  "valid": true,
  "drawStatus": "COMPLETED",
  "winner": true,
  "prizeAmount": 10000.00,
  "claimEligible": true,
  "merchantName": "Ayo Fadez Barbers",
}
```

```
"lgaName": "Ikeja Local Government Area"
}
```

17. Security, Privacy and Data Protection Baseline

- Use HTTPS for all deployed environments.
- Do not expose full customer ticket IDs in normal merchant history or dashboards.
- Do not expose a merchant-facing QR code that can be used to impersonate a customer in the reward flow.
- Mask customer phone numbers in merchant history and general LGA analytics.
- Store normalised phone numbers encrypted for controlled retrieval and separately hashed for matching/deduplication where appropriate.
- Encrypt bank name/account information at rest and restrict access to authorised prize-claim processors.
- Never return bank information through merchant APIs.
- Use framework-standard secure password/credential mechanisms and OTP expiry/rate limits.
- Use role-based authorisation for Merchant, LGA Admin, Claim Processor and Auditor functions.
- Audit merchant verification, receipt issuance, delivery, draw actions, claim status changes and privileged data access.
- Use synthetic citizens and synthetic bank data in the prototype.

18. Demo Dataset

- 1 target Lagos LGA, initially Ikeja for demonstration.
- 20-50 fictional merchants across barbershop/salon, supermarket, restaurant, pharmacy, fashion and electronics categories.
- 500-2,000 synthetic receipts.
- Synthetic phone numbers and customer references only.
- Weekly and monthly draw configurations.
- Several invalid, refunded and duplicate receipts.
- 20-50 fraud flags.
- Multiple prize tiers and a small set of demo winners.
- Synthetic prize claims in Under Review, Verified, Approved, Paid and Rejected states.

19. End-to-End Meeting Demonstration Script

1. Open the LGA Dashboard and explain that all metrics are demo data.
2. Open Merchants & Sales to show registered merchants, transaction value, category mix and merchant status.
3. Open the Merchant Portal and verify a sample business using an LGRRS System ID or demo Lagos Tax ID.
4. Create a ₦2,500 haircut receipt for a customer.
5. Select WhatsApp/SMS and send the receipt.
6. Show the merchant history with the receipt reference masked and no merchant-facing QR code.
7. Open the customer Check Your Receipt page and enter the privately delivered ticket ID.
8. Show a valid receipt result and the applicable draw status.
9. Use a pre-seeded winning ticket to display the Congratulations / Prize Won state.
10. Select Claim Your Prize and enter name, receipt phone, bank name and account number.
11. Submit the claim and show the generated claim reference with status Under Review.
12. Run or show a completed demo draw from the LGA administrator interface.
13. Open Fraud & Risk to show blocked or reviewed events.
14. Return to the dashboard and show how receipt, sales, reward and fraud metrics are reflected in reporting.

20. Suggested Build Milestones

Milestone 1 - Foundation: Solution structure, SQL schema, roles/authentication, seed data and environment configuration.

Milestone 2 - Merchant Onboarding: Business registration, verification adapter, phone/OTP access and merchant profile.

Milestone 3 - Receipt & Delivery: Receipt issuance, masked merchant history, WhatsApp/SMS/In-App delivery abstraction.

Milestone 4 - Consumer Check: Public ticket checker, validity states, draw status and winner result.

Milestone 5 - Reward & Fraud: Eligibility rules, duplicate/refund controls, risk flags and reward-entry creation.

Milestone 6 - Draw Engine: Weekly/monthly periods, candidate freeze, secure selection, result persistence and publication.

Milestone 7 - Prize Claims: Winner claim form, phone match, encrypted bank data and claim status workflow.

Milestone 8 - LGA Dashboards: Overview dashboard, merchant/sales analytics, fraud view, current draw and activity feed.

Milestone 9 - Demo Hardening: Security review, responsive UI, synthetic-data reset, scripted demo and deployment.

21. Updated Prototype Acceptance Criteria

- A merchant can register using a Lagos Tax ID or LGRRS System ID plus phone number.
- An unverified/suspended merchant cannot issue reward-eligible receipts.
- A verified merchant can create a receipt and send it through at least one delivery channel.
- Merchant history does not expose the full customer receipt/ticket ID or QR code.
- Merchant history masks customer phone numbers.
- A consumer can check a full ticket ID on a public page.
- The consumer result distinguishes valid/pending, winner, non-winner, void/refund, review and not-found states.
- An eligible receipt receives exactly one reward entry per applicable draw.
- The same receipt cannot create duplicate active entries.
- A winning consumer can submit full name, matching phone, bank name and account number.
- Claim submission generates a claim reference and Under Review status.
- Administrator can run a draw from a frozen eligible population.
- Winner and draw metadata are saved and auditable.
- LGA dashboard metrics are derived from underlying demo records.
- Merchant & Sales view reports merchant counts, transaction values, sales trend and status.
- Fraud and important administrator actions are visible in the audit trail.
- All demo financial and operational figures are clearly labelled as demo data.
- All main screens are usable on desktop and mobile widths.

22. After Prototype Approval

- Map the target Lagos LGA's actual merchant registration, revenue and receipt workflows.
- Confirm whether Lagos State Tax IDs, LGA IDs or another authoritative merchant identifier should be used.
- Request approved sandbox/API documentation for business verification and any relevant receipt/revenue systems.
- Replace DemoBusinessVerificationProvider and other demo adapters with approved integrations.
- Confirm lawful receipt classes and prize-funding mechanism.

- Complete legal, data-protection, procurement, consumer-protection, gaming/promotion and public-finance review.
- Complete security and privacy impact assessment before using real customer phone or bank data.
- Run a small controlled pilot before expansion to additional wards or LGAs.

Appendix A. Current UI Reference Screens

The following screens are the current visual baseline for the technical team. They are design references; final field names and interaction details should follow the API and privacy rules in this specification.
